

# Greenhouse Gas Emissions Reduction & Reporting Strategy

Corcentric provides comprehensive analytics related to GHG emissions.

## Increase Fuel Economy. Drive Cost Out of Your Fleet.

According to the SEC's proposed mandatory climate risk disclosures, all publicly traded companies will be required to disclose greenhouse gas emissions.

Assisting with your environmental, social, and governance values (ESG), we'll provide comprehensive reporting on monthly CO<sub>2</sub>e GHG Emissions for each asset in your fleet.

Corcentric is your solution to staying compliant. Reduce your scope 1 mobile emissions by managing your asset life cycles more effectively.

Contact us to learn how we can help your business calculate emissions and maintain business continuity.

For each required disclosure a of a registrant's Scopes 1 and 2 emissions, registrants would be required to disclose the emissions both disaggregated by each constituent GHG and in the aggregate, expressed in terms of metric tons of carbon dioxide equivalent (CO<sub>2</sub>e). CO<sub>2</sub>e is the common unit of measurement used by the GHG Protocol to indicate global warming potential (GWP) of each GHG, expressed in terms of the GWP of one unit of carbon dioxide.

A registrant would be required to describe the methodology, significant inputs, and significant assumptions used to calculate its GHG emissions. Corcentric's Greenhouse Gas Emissions Reduction and Reporting Strategy reports on scope 1 direct GHG emissions resulting from the operation of owned or leased mobile combustion sources which are within an organization's inventory boundary. The combustion of fossil fuel results in three of the seven constituent GHGs covered by the Kyoto Protocol including CO<sub>2</sub>, CH<sub>4</sub> and N<sub>2</sub>O.
